

10 Things You Should Know About eClosing

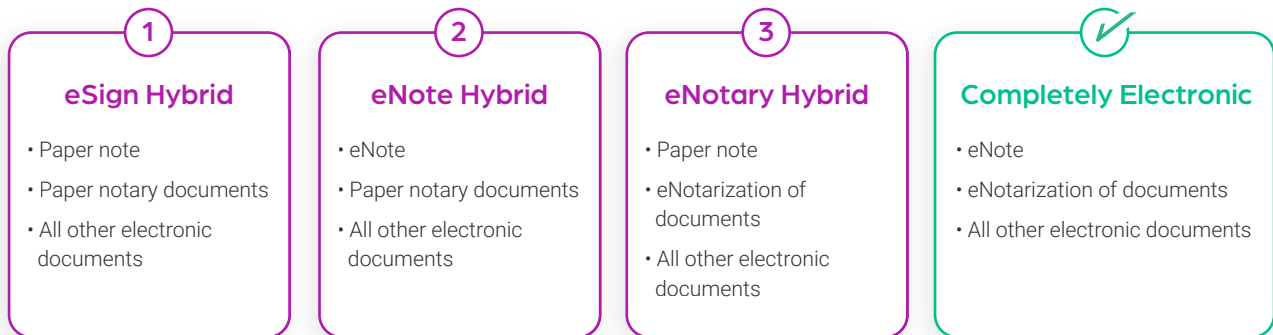

1. What is an eClosing? (and how does it differ from an eMortgage?)

An eClosing, also known as a digital closing, is a mortgage loan closing that proceeds electronically, meaning that some or all of the closing documents are electronically signed. This happens within a secure electronic environment.

You might also see the term “eMortgage” in reference to mortgage technology. According to Fannie Mae and Freddie Mac, this term specifically refers to an electronic mortgage that is accompanied by an eNote (electronic promissory note). So if you see a reference to an eMortgage, it must include an eNote, but the term eClosing means a closing process that doesn’t necessarily involve an eNote.

2. What is a hybrid eClosing?

A closing doesn't have to be 100% digital to be considered an eClosing; instead, a closing that is partially electronic and partially paper is called a hybrid eClosing. In addition to a completely electronic eClosing, there are three key types of hybrids:

3. Where are RON eClosings allowed, and do they make sense?

With Remote Online Notarization (RON), borrowers can eSign the closing documents, and the eNotary observes the signing from a remote location via a secure video connection in a dedicated RON platform. eNotaries confirm the borrower's identity through multi-factor authentication methods such as credential analysis or knowledge-based authentication (KBA). [Click here for a list of states that currently allow RON within their jurisdiction—only 6 states are absent from the list.](#)

Lenders who have transitioned from paper to hybrid and then on to full eClosing (with RON, eVault and eRegistry) benefit from increased speed, loan quality and reduced expenses with the elimination of paper and shipping costs. They have also significantly lowered their compliance risk.

4. Do the GSEs accept electronic signatures on closing documents?

Yes, both Fannie Mae and Freddie Mac accept eSignature and eNotes. Ginnie Mae and the Federal Home Loan Banks system also accept eNotes as collateral.

5. How do closing agents feel about eClosings?

More and more closing agents support eClosings, and many have become full adopters of RON technology. After all, an eClosing doesn't replace the closing agent; it actually makes their job easier. Mortgage experts have noted recently that the digital tools behind eClosings will relieve closing agents of mundane tasks, save people-hours, and allow agents to return to valuable relationship-building with clients.

Total eClose. DocMagic's comprehensive end-to-end eClosing system, provides everything you need for hybrid and paperless eClosings, including remote online notarization (RON), knowledge based authentication, and identity validation. These tools allow settlement agents to be automatically included in the workflow as soon as the loan documents are processed for eClosing.

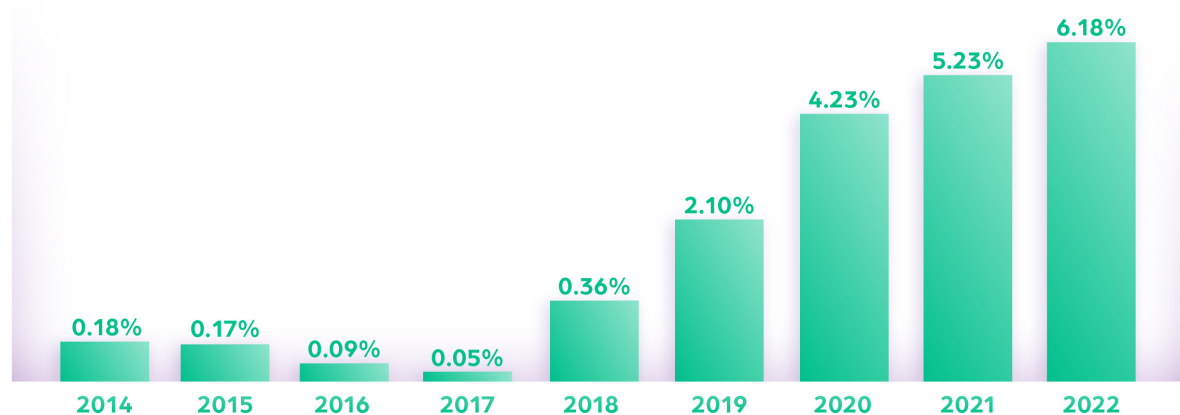

6. What percentage of the industry conducts eClosings?

While paper closings still make up the majority of mortgage closings, digital closings are becoming more widely used. Lender and title organizations are shifting to digital processes to meet growing consumer expectations, and with the increased costs of origination in the current landing landscape, lenders and title companies need to find ways to increase operational efficiency.

eNotes in particular, legal nationwide, are quickly rising in popularity: MERS® reports that eNotes as a share of total notes registered have risen steadily year after year, from less than 1% of all notes in the mid-2010s to 6.18% of all notes by 2022. In fact, reports continue to show a rise in early 2023 with a peak of 7.59% of all notes comprised of eNotes.

7. Will my investors accept eNotes?

As mentioned earlier, investors such as Fannie Mae, Freddie Mac and Ginnie Mae are set up to accept eNotes. The MERS® eRegistry – the system of record for eNotes – also provides a list of MERS® eRegistry members that accept eNotes. You should contact your investors directly to discuss your eNote initiative, as many additional warehouse lenders and investors will accept eNotes based on their eVault status and relationships with loan originators.

8. Do I need an eVault?

If you plan to offer eNotes, you're going to need an eVault. eNotes need to be stored in a certified eVault, which can also provide instantaneous eDelivery of eNotes to other stakeholders. If you plan to sell eNotes to a warehouse lender or investor, they will also need their own eVaults. Several of the industry's largest investors are already integrated with DocMagic's eVault technology to store eNotes.

Unlike an imaging system, which only stores an electronic copy or "view" of the paper documents, an

eVault also stores the source XML data, audit trail, original digital signature and tamper-evident seal to protect the integrity of the legal documents.

DocMagic's eVault is certified and developed from proprietary technology, meaning our eVault is part of an end-to-end eClose platform that can seamlessly connect with every solution in our entire eClosing suite. Our eVault also features a Global File System that accepts virtually any digital asset, including eChattel (electronic promissory notes, auto notes, commercial leases, etc.); any type of electronic file, including authoritative copies; and all data formats, such as TIFF, Word, Excel, PDF, Category 1 SMART Doc®, and even audio files.

9. Why should I consider eClosing?

eClosings have a variety of benefits! Below are a few of them:

- **Better borrower experience:** Borrowers can complete the mortgage loan process much faster with an eClosing compared to a traditional paper closing. Additionally, they can receive and view the closing package ahead of the closing, cutting the closing ceremony to as little as 15 minutes.
- **Improved security:** eClosings come with increased compliance, ensuring lenders can successfully navigate the regulatory landscape.
- **Increased accuracy and operational efficiency:** The use of eSignatures means there are no missed signatures, initials or dates, resulting in less time wasted due to human error.
- **Post-closing efficiency:** eNotes can be eDelivered and sold to the secondary market as soon as the loan closes.
- **Convenience:** Remote online notarization, and the 100% paperless eClosings it can lead to, allows borrowers to close from the safety and comfort of their homes.

10. How can I get started with eClosing?

For many lenders, it's easiest to start with basic eSign hybrids — especially if your document generation solution is already e-enabled (set up for eSignatures). **DocMagic's document generation** customers, for example, can be set up to begin testing eSign hybrids in as little as 24 hours.

If your current document generation solution isn't already e-enabled, then you will need to utilize a program like **DocMagic's AutoPrep** solution, which can instantly e-enable any third-party loan documents for eSignature, eNotarization and eClosing.
